# Addendum

## LAN Solution Network Tester

This addendum contains important changes to your May 2003 LAN Solution Network Tester manual. Please keep this addendum with that document for easy reference.

On page 11 in Section 2.4 of the May 2003 manual, the package contents for the TS565A incorrectly states that (2) “no-fault” RJ-12 cables are included. Please note that the TS565A includes (9) “no-fault” RJ-12 cables, not 2. The TS565A information in Section 2.4 should be stated as shown below. We apologize for any inconvenience that this misinformation may have caused.

The TS565A comes with the following items:

- (1) LAN Solution Network Tester main unit
- (2) 9-volt transistor batteries: (1) for the main unit and (1) for the tone tracer
- (8) Cable test remotes
- (1) Tone tracer
- (2) 1-ft. (0.3-m) patch cables
- (2) RJ-45 to alligator clip cables
- (2) RJ-45 to F-connector adapters
- (9) “No-fault” RJ-12 cables
- (1) Zippered Cordura case with space for everything that comes with the TS565A
- This users’ manual
